

Overview

Document Type: Bug Report

Application: Google Translate – Text Translation

Version: 1.0

Testing Type: Manual Testing

Prepared By: Sharmini Udayakumar – Junior QA Engineer

Testing Scope: Functional, Usability, Performance, Compatibility and Negative Testing

Languages Considered: English, Tamil, Sinhala and other supported languages

Test Environment: Google Translate Web Application – <https://translate.google.com/>

1. Introduction

This report summarizes the translation application testing results, focusing on translation quality, boundary conditions, and saving limitations. The identified issues are documented with their expected results, actual results, and recommendations to improve application functionality, usability, and overall user experience.

2. Findings

BUG-001: Copy-Paste Workaround Does Not Support Text Above 5,000 Characters

Bug ID : BUG-001

Related Test Case : TC-094

Module : Translation Input

Severity : Medium

Priority : Medium

Status: Failed

Bug Title: Copy-and-paste workaround does not allow users to translate text exceeding the 5,000-character limit.

Precondition:

- User is on the translation page.
- Translation input field is available.

Steps to Reproduce:

1. Open the translation application.
2. Select the required source and target languages.
3. Enter text exceeding 5,000 characters.

4. Observe the displayed limitation message.
5. Copy the text and paste it into the translation input field.
6. Observe whether the application accepts text beyond 5,000 characters.

Expected Result:

The application should either:

- Support the recommended copy-and-paste method for text exceeding 5,000 characters, or
- Clearly explain that the translation input remains limited to 5,000 characters and provide an appropriate alternative.

Actual Result:

- When text exceeds 5,000 characters, the application displays:

"To translate text longer than 5,000 characters, copy and paste instead."

- After copying and pasting the text, the input remains limited to 5,000 characters.
- The suggested workaround does not allow the user to enter text beyond the stated limit.

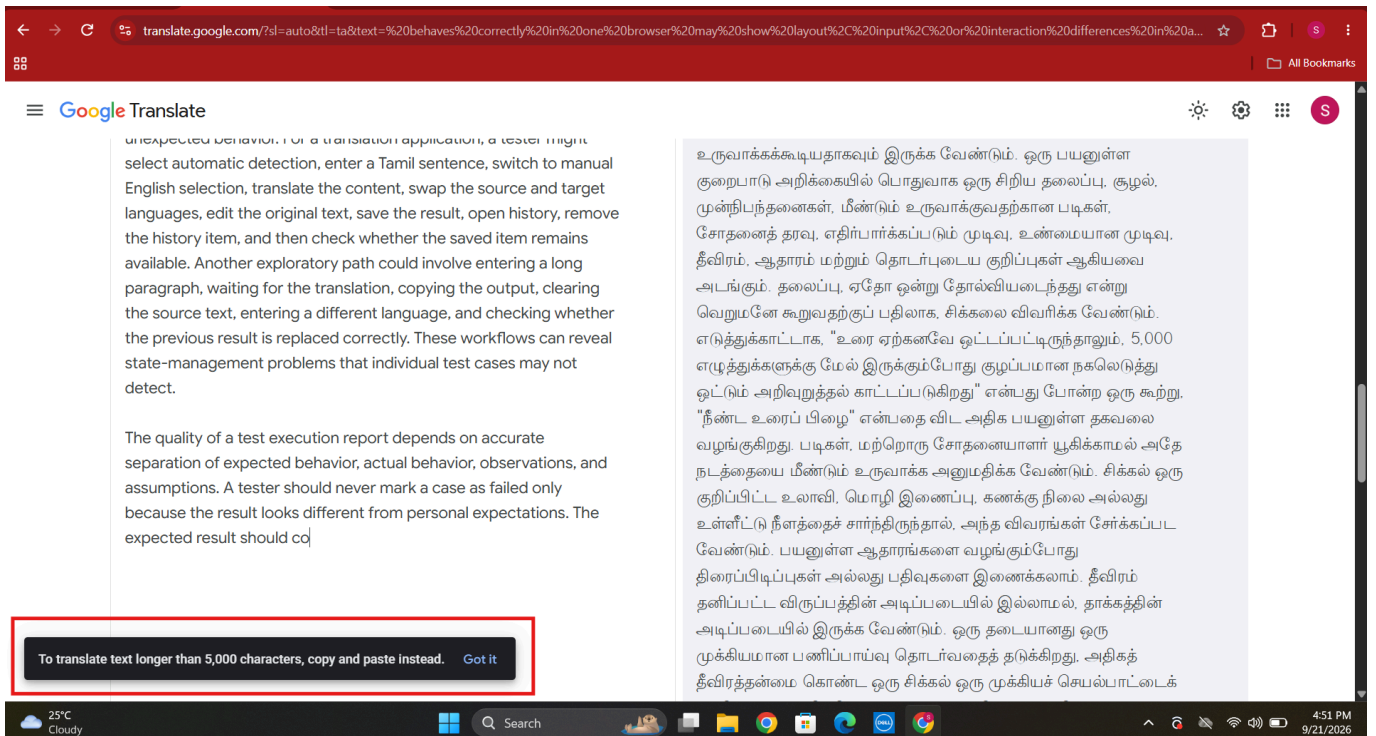

Impact:

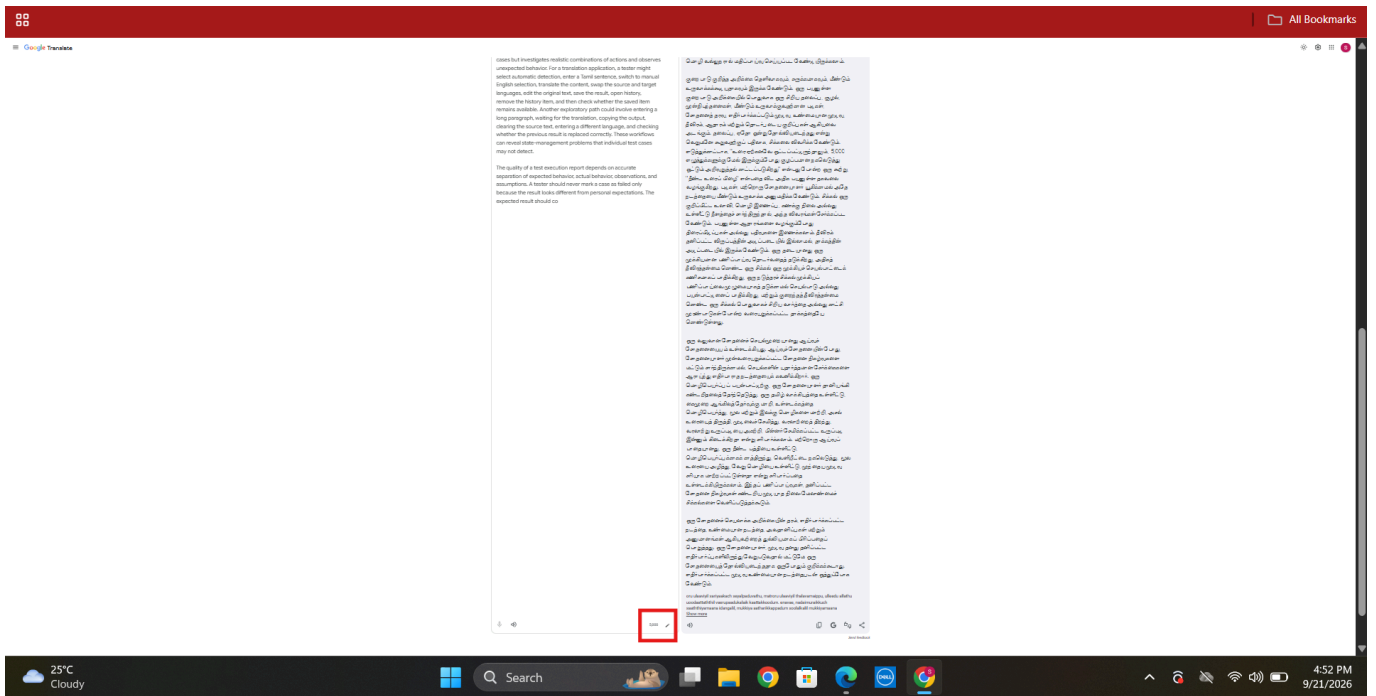

Users may be confused by the suggested workaround and unable to translate longer text through the expected process.

Recommendation:

Review the character limit and workaround behavior. Ensure the displayed message accurately reflects the supported functionality.

Evidence:

BUG-002: Insufficient Explanation When Saving Long Translations

Bug ID : BUG-002

Related Test Case : TC-092

Module : Translation History / Save

Severity : Low

Priority : Medium

Status: Need Improvement

Bug Title: Saving long translations displays a limitation without sufficient user guidance.

Precondition:

- User has generated a translation.
- Translation is long enough to trigger a saving limitation.

Steps to Reproduce:

1. Open the translation application.
2. Enter a long text and translate it.
3. Attempt to save the translation to the saved section using the star icon.
4. Observe the message displayed by the application.

Expected Result:

The application should clearly inform the user when a translation cannot be saved because of its length. The message should explain the limitation and, where applicable, provide an alternative action.

Actual Result:

- A "Translation too long to save" message was observed.
- The application did not provide sufficient explanation of the saving limitation or guidance on how the user could proceed.

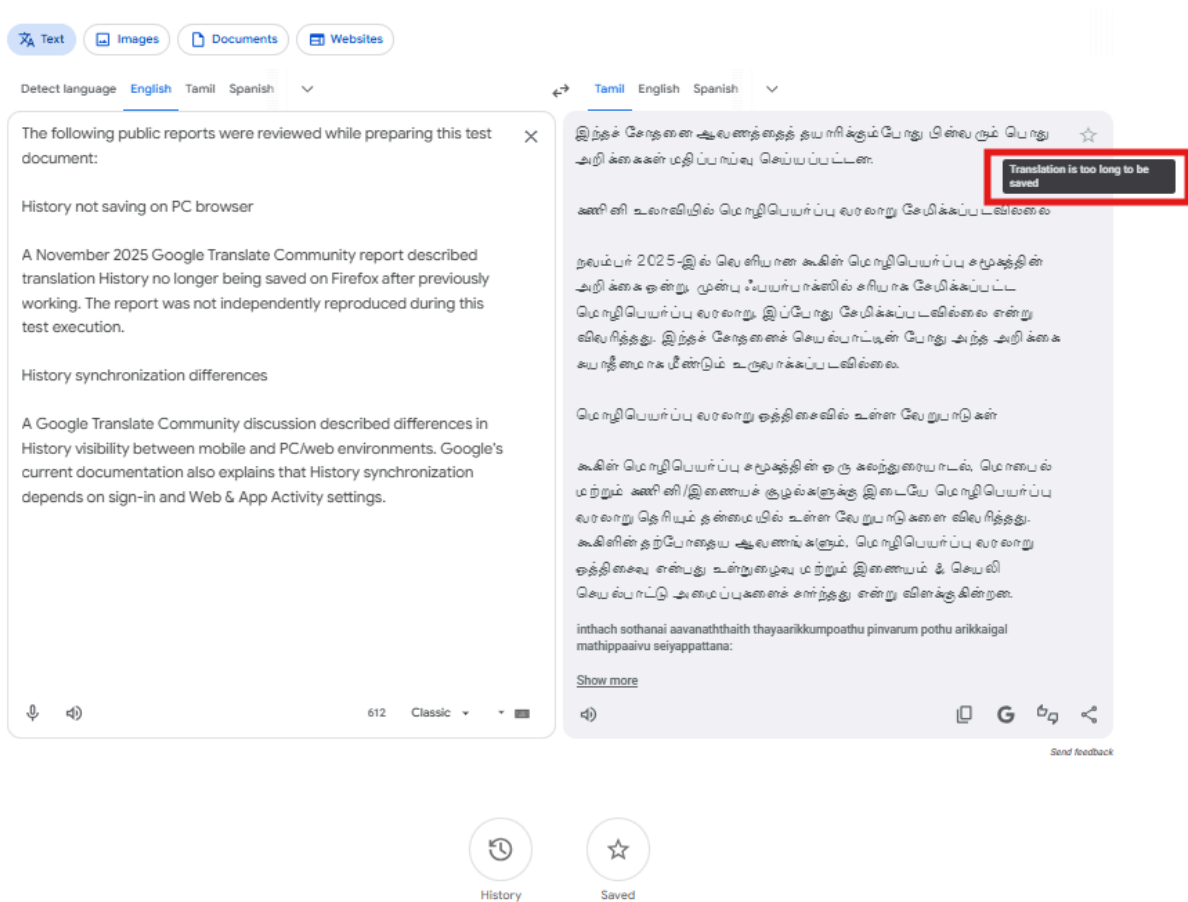

Impact:

Users may not understand why the translation cannot be saved or what action they can take next.

Recommendation:

Improve the error message by including the relevant character limit (if applicable) and clear guidance, such as shortening the translation or explaining whether another saving method is supported.

Evidence:

3. BUG-003: Translation Quality Requires Improvement for English-to-Tamil Translation

Bug ID : BUG-003

Related Test Case : TC-051

Module : Translation Quality

Severity: Medium

Priority: Medium

Status: Need Improvement

Bug Title: English-to-Tamil translation contains direct or contextually unsuitable wording and untranslated English terms.

Precondition:

- Translation application is available.
- English and Tamil languages are selected.

Test Data:

English text requiring translation into Tamil.

Steps to Reproduce:

1. Open the translation application.
2. Select English as the source language.
3. Select Tamil as the target language.
4. Enter the English test sentence.
5. Execute the translation.
6. Review the translated output for meaning, natural wording, and untranslated terms.

Expected Result:

- The translated text should reasonably preserve the original meaning.
- Tamil wording should be natural and contextually appropriate.
- English terms should be translated where suitable, or retained only when technically or linguistically justified.

Actual Result:

- The translation was generally understandable.
- Some wording was too direct or contextually unsuitable.
- Some English terms remained untranslated.

Impact:

Users may receive translations that require manual correction, particularly when the content is intended for formal communication, education, or Tamil-speaking audiences.

Recommendation:

Review translation quality for contextual accuracy, natural Tamil phrasing, and appropriate handling of English terms. Conduct additional testing using different sentence structures and practical scenarios.

Detect language English Tamil Spanish

Please make sure you add your name and the position you are applying for in the subject.

- Create proper documentation including installation, configuration, execution etc.
- Move all work to a Google / One Drive folder and share the folder link with edit access
- You can upload to tools like GitHub and share the link.
- Submit all four documents - Test Plan, Test Cases document, Bug report and Test summary report) on or before the deadline.
- Please feel free to contact us for any questions - respond back to the email with your concerns
